Masonite Beams
Installation Guide for Floor System Construction
Safety Bracing Details

**UNBRACED JOISTS ARE UNSTABLE!**
- Do not walk on or apply any materials to the joist area until the floor system is properly braced.
- The bracing should be removed in sequence as the decking is installed.
- The following represents a generic method of bracing a floor. Each system will be slightly different and the installer must ensure that all sections of the floor are accounted for.

Notes:
- Full depth I-joist blocking panels may be used instead of solid timber stability blocks.
- All blocks to be cut accurately and squarely to maintain spacing of joists.
- Additional blocks and bracings are required for any areas of joists running in opposite directions and for cantilevered joists (unless permanent closure piece is installed at this stage). Install further sets of blocks and diagonals at a maximum of 12m centres in long runs of joists.

Connections

**MULTIPLE PLY GLULAM MEMBERS - FIXING DETAILS**
Allowable uniform load applied to multiple glulam beam kN/m

ABC Construction Details

A1 MASONRY WALL RESTRAINT – PERPENDICULAR TO JOIST

1. Thin metal restraint strap installed in accordance with the manufacturer's instructions
2. Min. 38 x 97mm nogging fixed to joists by skew nails

A2 MASONRY WALL RESTRAINT – PARALLEL TO JOIST

1. Restraint strap fitted to joist on non-restraint type masonry hanger
2. Parallel restraint straps may only be omitted if the joist has at least 90mm of direct bearing on the wall, provided that the height of the wall does not exceed 2 storeys
3. Restraint strap on built-in joist

A3 PARALLEL PARTITION NOGGINGS

1. Non-load bearing stud partition fixed to noggin (max. self-weight of partition 0.8kN/m run)
2. 38 x 75mm partition noggin supported by metal z-clips, nailed in accordance with the manufacturer's instructions
3. Noggings may also be attached with 2no. 3.35 x 65mm nails skew nailed at each end

A4 PERIMETER NOGGINGS

1. Timber noggin fitted between joists to support free edges of decking at external or internal walls. Also applicable to masonry walls
2. Noggings may be skew nailed to joists or supported on z-clips

B1 I-JOIST BLOCKING PANEL

1. Masonite I-Joist blocking panel
2. Joist has full bearing on timber plate

B2 RIM I-JOIST

1. Masonite I-Joist rim board
2. Joist requires 45mm minimum bearing

B3 RIM BOARD

1. 38mm Glulam or similar approved
2. Joist requires 45mm minimum bearing

B4 MASONRY HANGER

1. Perimeter nogging for decking support where required
2. Proprietary approved masonry joist hangers - web stiffeners may be required, refer to layout drawing
3. Parallel restraint straps will be required with non-restraining hangers - see A2
ABC Construction Details

**B5 MASONRY WALL BEARING**

1. Joist end built into wall. Note some capping devices may require less than a full bearing to prevent fouling the cavity
2. Perimeter nogging

**B6 PARALLEL TIMBER FRAME WALL**

1. Masonite I-joist with half bearing into wall
2. Rim board to suit wall load

**B7 INTERMEDIATE BEARING — LOAD BEARING WALL ABOVE**

1. Load bearing wall directly above wall below
2. Masonite I-joist blocking panels between joists

**B8 INTERMEDIATE BEARING COMPRESSION BLOCKS**

1. Load bearing wall directly above wall below
2. Height of compression blocks = joist depth + 2m
3. 38 x 89mm minimum softwood compression blocks

**B9 INTERMEDIATE BEARING NO LOAD BEARING WALL ABOVE**

1. Web stiffeners where required

**B10 INTERMEDIATE BEARING MASONRY WALL**

1. Perimeter nogging
2. Minimum 89mm bearing

**B11 INTERMEDIATE BEARING DOUBLE BLOCKING**

1. Load bearing wall directly above wall below
2. Webs of blocking in line with edge of stud wall above and below
ABC Construction Details

**B12 COLUMN WITH COMPRESSION BLOCKS**

1. Softwood compression blocks, min. 38 x 89mm, height = joist depth + 2mm
2. I-joist blocking panels
3. Number of blocks to suit width of column above

**B13 CANTILEVER SUPPORTING WALL**

1. I-joist Blocking
2. 38mm Glulam or similar approved
3. Structural cantilever must not exceed 600mm

**B14 REINFORCED CANTILEVER SUPPORTING WALL**

1. 19mm ply reinforcement one or both sides of cantilevered joists, (determined by loading) nailed at 150mm centres with 3.35mm dia. nails, 65mm long. Stagger nails when fixing ply both sides

**B15 NON LOAD BEARING CANTILEVER**

1. I-joist Blocking
2. 38mm Glulam or similar approved
3. Max. cantilever length is 1200mm. No load applied on cantilever

**B16 WALLPLATE CONNECTION**

1. Top mount hanger
2. Timber bearing plate securely fixed to flange of steel beam/masonry wall (design of fixings by Building Designer)

**C1 I-JOIST TO SOLID BEAM CONNECTION**

1. Top mount hanger
2. Face mount hanger
3. Glulam beam or similar approved
4. Face mount hangers which do not laterally support the joist top flange require web stiffeners
**C2 I-JOIST TO I-JOIST CONNECTION**

1. Top mount hanger
2. Filler block or proprietary metal clips must be installed with multiple joists
3. Backer block on hanger face only for double joist
4. Backer block both sides of single joist
5. Face mount hanger
6. Double I-Joist

- Backer blocks nailed with 10no. 3.75mm diameter nails x 75mm long, with ends clinched if possible.
- For top mount hangers, backer block tight to top flange of joist.
- For face mount hangers, backer block tight to bottom flange.
- Filler blocks fitted tight to top flange.
- Use 10no. 4.00mm nails x 90mm long, for HB joists.
- Note that approved hangers which eliminate the need for backer blocks are available. See detail C3.

**C3 I-JOIST TO I-JOIST CONNECTION — BACKERLESS**

1. Filler block or proprietary metal clips must still be installed with multiple joists
2. Approved hanger designed for use without backer blocks

**GLULAM BEAMS**

Based on BS5268

**Notes:**

Holes must be placed along the neutral axis and spaced apart at least 3 x largest diameter hole. For holes outside these rules please contact engineering support.
Allowable Holes

MASONITE BEAMS

Unless otherwise stated:

- All holes must be placed on the centre of the web.
- No holes are allowed in the red safety zones.
- Holes must not extend into the flange material.
- Holes with diameter less than 20 mm can be placed anywhere in the web, but with a minimum distance of 40mm between holes.
- One hole with diameter less than 40 mm can be placed anywhere in the web, except in the safety zones, providing the general rules for hole spacing are followed.
- The maximum dimensions for rectangular holes are: a = 300 mm and b = 200 mm.
- Placement restrictions and the maximum sizes of holes are shown in the diagram and table below.

![Diagram showing allowable holes and safety zones.]

### Notes:

All values above are valid for uniformly distributed loads. Information regarding the calculation of the reduction of shear capacity caused by a hole can be found in Masonite Beams European Technical approval; ETA 12/0018. Any holes falling outside of these rules must be checked by our engineering support service.
Masonite Product Profiles

Notes:
The HL Joist is identified by a RED dotted line on the flange.

THESE CONDITIONS ARE NOT PERMITTED UNDER ANY CIRCUMSTANCES
If in doubt, please ask for advice before you cut.

**NO holes close to joist ends**
Use hole chart for max. size & min. distance to wall.

**NO notches in flanges of Masonite joists**

**NO bevel cuts beyond the inside face of wall**

**NO notches or holes in Glulam**
Except as advised in hole chart for the product.

**Storage**
Always store joist packs flat, properly covered and above the ground.

**Handling**
Never lift or move the joist packs by the flanges.

Always follow the HSE guidance on manual handling.

BS5268 Version

Contractors should be aware of their health and safety responsibilities under the Construction (Design and Management) Regulations 2015.
